Applied Practice Experience for Nutrition, part II (216304)

Teresa Fung

2020 Fall (1.25 Credits) **Schedule:** M 1131 AM - 1259 PM

Instructor Permissions: None **Enrollment Cap:** 10

All students completing a Master of Public Health degree must complete an Applied Practice Experience ("Practicum"). This required course is designed to provide some tools and insights that will be useful in future professional practice in nutrition and share that experience with their MPH Nutrition colleagues via a "peer-to-peer" joint learning experience.

Requirements: **HSPH: PW MPH 65 NUT**

Additional Course Attributes:

Attribute	Value(s)

Applied Practice Experience for Nutrition (215722)

Teresa Fung

2021 Spring (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 30

The course provides students with tools and practice in understanding how individual strengths, teamwork, and the ability to collaborate in interdisciplinary, cross-sector partnerships are all critical skills in addressing the complex scenarios of public health work that our students will face when they graduate. The course is limited to students in the MPH65 Nutrition field of study.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Prob. Tuberculosis in Mongolia (190739)

Ganmaa Davaasambuu

2020 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course will consist of a series of lectures, workshops, and field trips all to be conducted in Mongolia during the summer. It will build students' understanding of issues related to the provision of clinical care, and the conduct of epidemiological research, concerning an endemic public health problem in a rapidly developing country, whose economic base still depends significantly on pastoral nomadic livestock herding.

Requirements: **Course Restricted to Chan HSPH degree seeking students**

Scientific Writing in Nutrition and Epidemiology (190742)

Frank M. Sacks

2017 Spring (2.5 Credits) **Schedule:** M 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 6

This course is designed for nutrition/epidemiology doctoral degree students. Others may be admitted after discussion with the instructor. The course will cover organization of scientific papers, presentation of data in graphical and tabular forms, and style. The course is designed for advanced students who are beginning to work on a paper for publication. Each section of a paper will be discussed extensively. The goal is for each student to have a manuscript ready for submission to a peer review journal at the end of the course. Course Activities: Principles of scientific writing will be taught. Students will work on their papers independently, under the overall supervision of their own faculty advisors. Each student will critique the papers of classmates. The instructor will guide the discussion and use the paper to make additional points of constructive criticism, which will serve to illustrate the principles enunciated at the beginning of the class. Guidelines for journals and co-author criteria will be discussed. Approach to revisions based on reviewers' comments will be covered.

Course Location: Building 2 Room 375

Nutritional Epidemiology (190750)

Walter Willett

Deirdre Tobias

2021 Spring (2.5 Credits) **Schedule:** F 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 49

Reviews methods for assessing the dietary intake of populations and individuals. Students gain experience in the actual collection, analysis and interpretation of dietary intake. The course also reviews several specific diet/disease relationships, integrating information from international studies, secular trends, clinical trials, analytical epidemiology, and animal experiments.

Course Prerequisites: EPI and BST core (ex. EPI201 and BST201 or ID201. PHS2000 fulfills BST requirement and can be taken concurrently.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PhD PHS NUT, DrPH

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Pre-requisites: (EPI200 or EPI201 or EPI208 or EPI500 or ID201 or ID207) AND (BST201 or BST202&203 or BST206&207 or BST206&208 or ID201 or ID207 or PHS 2000A). PHS 2000A may be taken concurrently.**

An Introduction to Planetary Health (215725)

Christopher Golden

2021 Spring (2.5 Credits) **Schedule:** W 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Over the past half century, the collective impact of humanity on the structure and function of Earth's natural systems has increased exponentially changing the biophysical conditions that support human life. As a result, we have entered a new epoch called the Anthropocene. Very rapid human population growth combined with even more rapid growth in per capita consumption are driving an extraordinary transformation of most of Earth's climate system, its oceans, land cover, biogeochemical cycles, biodiversity, and coastal and fresh water systems. These are the biophysical systems that underpin global food production, our exposure to infectious disease and natural hazards, and the habitability of the places where we live. There is growing concern that global environmental change is likely to be a major driver of the burden of disease over the coming century. As the pace and scale of human impacts on Earth's natural systems continues to grow, there is increasing interest in understanding and quantifying the implications

of these accelerating changes for human health. Recently this field has been termed "planetary health." This course is an elective geared toward PhD students and highly engaged MS and MPH students from all departments interested in exploring the implications of global environmental change on nutrition, infectious disease, mental health, and other domains of wellbeing. Throughout the course of the semester, students will engage in diverse materials from many types of examples of planetary health research, from nutrition and mental health, to infectious and non-communicable diseases. We will tease out common themes around how changes in the structure and function of natural systems lead to impacts on different dimensions of human health. As we approach these case studies, students will be engaged in active processing of the material and in-class discussions to understand parallel themes from each successive week.

Class Notes: **Course Requirements: In order to be considered for enrollment in the class, students must fill out the student interest form: https://harvard.az1.qualtrics.com/jfe/form/SV_9SGYONTO9Lx3NZj and also request instructor permission to enroll in this course.**

Nutritional Epidemiology II (190754)

Alberto Ascherio

2017 Fall (2.5 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 17

This course addresses methodological aspects of research in nutritional epidemiology. Topics include validation studies, adjustment for energy intake, and correction of measurement error. Theoretical as well as practical aspects will be covered. This course is intended primarily for students interested in doing epidemiologic research.

Course Activities: Review of original articles, data analyses, computersimulations.

Course Prerequisites: PHS2000 or BST210 and ID214 required. PHS2000 or BIO210 may be taken concurrently.

Requirements: **HSPH: ID221**

Additional Course Attributes:

Prog & Princ of Public Hlth (190763)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

The ability to translate nutrition and public health research to practical applications on the community and population level is increasingly becoming critical in the practice of public health nutrition. This course is designed for both masters and doctoral level students interested in acquiring skills for linking nutrition research to action in US and international settings; post-doctoral fellows with relevant applied research interests are welcomed. The course provides an introduction to research and practice of public health nutrition in both the US and abroad by presenting conceptual and methodological perspectives on topics ranging from existing nutrition programs and policies to planning and evaluation, to nutritional surveillance. Participatory, interdisciplinary approaches to research and practice are discussed and incorporated into student workgroup activities.

Course Activities: Discussions, assigned readings, class exercises, class presentations and written group project.

Course Note: Enrollment limited to 30 students. Prior coursework recommended in one or more of the following areas: nutrition, exercise physiology, program and policy implementation and evaluation, participatory and community-based public health practice and research.

Course restricted: Nutrition students only (or instructor permission)

Built Environment, Human Transportation, Public Health, and Climate Change (190823)

Anne Lusk

2021 Spring (2.5 Credits)		**Schedule:**	MW 0200 PM - 0330 PM
Instructor Permissions:	None	**Enrollment Cap:**	30

At the completion of this course, students will have an understanding of different built environments, human energy expenditure in those environments, and if the human transportation addresses climate change. For examples, parks provide mental and social benefits but many park users have low human energy expenditure (sports spectators, slow walkers, park bench sitters, etc.). In contrast to parks, bicyclists in bicycle environments have higher energy expenditure. Drivers often store their cars on the side of the road and this space could be for electric Bus Rapid Transit (BRT), cycle tracks, and trees as responses to Climate Change and health. The bicyclists and pedestrians in these corridors would be less vulnerable to absorbing ultra-fine particles deep into their lungs, benefit from the physical activity, and feel cooled in the shade.

During this course, students will assess whether measures such as Health Impact Assessments (HIA) and policies such as Complete Streets fully provide for high human energy expenditure, climate change, ethnic-diversity, and women/children/seniors. Through the students' understanding of the built environment and human energy expenditure measures such as METs, students will explore translating information on obesity, physical activity, and health into practice effectively. The course is for undergraduate students, graduate students, and individuals interested in the design of the built environment. Those enrolled may be

interested in environmental health, landscape architecture, park design, architecture, car parking, road design, exercise physiology, public health, urban planning, government, engineering, METs, human energy expenditure measures, and walking and bicycling in all populations. The focus will be on creating urban forms with high human energy expenditure to lessen obesity, diabetes, stroke, Alzheimer's disease, and cancer in all populations and to respond to climate change. This course seeks to address health through the built environment in more ways than only recommending that individuals engage in 30 minutes of physical activity most days of the week.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Built Environment, Human Energy Expenditure, and Public Health (190823)

Anne Lusk

Walter Willett

2017 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 17

At the completion of this course, students will have an understanding of different built environments and human energy expenditure in those environments. As two examples, parks provide mental and social benefits but many park users have low human energy expenditure (sports spectators, slow walkers, park bench sitters, etc.). In contrast to parks, bicyclists in bicycle environments have higher energy expenditure. During this course, measures such as Health Impact Assessments (HIA) and policies such as Complete Streets will be studied to assess whether high human energy expenditure was considered. Through the students' understanding of the built environment and human energy expenditure measures such as METs, students will understand the ways of translating information on obesity, physical activity, and health into practice effectively. The course is intended for undergraduate students, graduate students, and individuals interested in the design of the built environment. Those enrolled may be interested in environmental health, landscape architecture, park design, exercise physiology, public health, urban planning, government, engineering, METs, human energy expenditure measures, HIA, and walking and bicycling in all populations. The focus will be on creating urban forms with high human energy expenditure to lessen obesity, diabetes, stroke, Alzheimer's disease, and cancer. This course is intended to fully address health and obesity reduction through the built environment in more ways than only recommending that individuals engage in physical activity.

Course Activities: Discussion, lectures, guest lectures, writing 3 three page double-spaced papers that culminate in one final paper that is a collection of the 3 papers, a design charrette, and delivering short presentations. Materials include readings, websites, webcams, and video clips.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Advanced Topics in Public Health Nutrition Research and Practice (190825)

Erica Kenney

Steve Gortmaker

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

This course reviews advanced methods in assessment of obesity, diet, and physical activity in epidemiologic and intervention studies. It also reviews study designs, cost-effectiveness analysis, and evaluation methods in obesity research. The course also discusses the role of physical environment, food environment, and policy environment in current epidemic of obesity and reviews the impact of nutrition transition and globalization of the economy on obesity risk in developing countries. Finally, the course examines the state of translational and dissemination research in obesity prevention.

Requirements: **Pre-requisites: (EPI200 or EPI201 or EPI208 or ID201) and ID537**

Additional Course Attributes:

Society and Health (191116)

Ichiro Kawachi

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 81

Analyzes major social variables that affect population health: poverty, social class, gender, race, family, community, work, behavioral risks, and coping resources. Examines health consequences of social and economic policies, and the potential role of specific social interventions. Reviews empirical and theoretical literature on mechanisms and processes that mediate between social factors and their health effects, and discusses alternative models for advancing public health.

Course Activities: Short written assignments, class discussion, final examination.

Course Note: Departmental requirement in the Department of Social and Behavioral Sciences.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45-HSB, MPH65-HSB, SM1 SBS, PHD PHS SBS

Wave 2 | PHD PHS NUT

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Social & Behavioral Sciences 201 Section: L3

Society and Health (191116)

Ichiro Kawachi

2018 Fall (2.5 Credits) **Schedule:** R 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 23

Analyzes major social variables that affect population health: poverty, social class, gender, race, family, community, work, behavioral risks, and coping resources. Examines health consequences of social and economic policies, and the potential role of specific social interventions. Reviews empirical and theoretical literature on mechanisms and processes that mediate between social factors and their health effects, and discusses alternative models for advancing public health.

Course Activities: Short written assignments, class discussion, final examination.

Course Note: Departmental requirement in the Department of Social and Behavioral Sciences.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45-HSB, MPH65-HSB, SM1 SBS, PHD PHS SBS, PHD PHS NUT

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Program Planning (211147)

Rebekka Lee

2021 Spring (2.5 Credits)		**Schedule:**	MW 0345 PM - 0515 PM
Instructor Permissions:	None	**Enrollment Cap:**	50

Provides an introduction to public health intervention planning. Applies social science principles to community assessment, data collection, and prioritization. Foci will include identifying health-related needs and assets for individuals, communities, organizations, and national groups and will discuss the various challenges that researchers and practitioners encounter when doing work "on the ground". There will be a strong emphasis on community involvement throughout the course.

Course activities: Assigned reading with participation in discussion and classroom-based application exercises, individual assignments, group project to develop a needs assessment.

Class Notes:

HSB-65s are required to take SBS 203 and therefore get priority enrollment during Wave 1, HSB-45s who choose to take SBS 203 to fulfill their SBS requirement may enroll in wave 2, PHS-SBS students may also enroll in wave 2, all other students may enroll in wave 3 if there is still space in the class.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | HSB-65

Wave 2 | HSB-45, PHS-SBS

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements:

HSPH: PW Degree Students

Instructor Permissions: None **Enrollment Cap:** 50

Provides an introduction to public health intervention planning. Applies social science principles to community assessment, data collection, and prioritization. Foci will include identifying health-related needs and assets for individuals, communities, organizations, and national groups and will discuss the various challenges that researchers and practitioners encounter when doing work "on the ground". There will be a strong emphasis on community involvement throughout the course.

Course activities: Assigned reading with participation in discussion and analysis of cae studies, applied individual application exercises, group project to develop a needs assessment.

Requirements: **Course restricted to students in the MPH45 HSB and MPH65 HSB programs**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
HSPH: Course Category	Category 2: Required Course

HSPH: Conditionally Approved	Conditionally Approved Course

Social & Behavioral Sciences 204 Section: 1

Program Implementation and Evaluation (211148)

Rebekka Lee

2021 Spring (2.5 Credits)		**Schedule:**	TR 0345 PM - 0515 PM
Instructor Permissions:	None	**Enrollment Cap:**	30

Provides and introduction to public health intervention implementation and evaluation in applied settings. Foci will include health-related intervention for individuals, communities, organizations, and local/national groups and will discuss the various challenges that researchers and practitioners encounter when conducting this work "on the ground". There will be a strong emphasis on community involvement throughout the course.

Course Activities: Assigned reading with participation in discussion and analysis of case studies, class presentations, applied individual application exercises, group project to design an intervention and evaluation plan.

Class Notes:

HSB-65s are required to take SBS 204 and therefore get priority enrollment during Wave 1, HSB-45s who have the SBS 203 prerequisite may enroll in wave 2, PHS-SBS students who have the SBS 203 prerequisite may also enroll in wave 2, all other students who have the SBS 203 prerequisite may enroll in wave 3 if there is still space in the class.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | HSB-65

Wave 2 | HSB-45, PHS-SBS

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: Pre-Requisite SBS 203**

Social & Behavioral Sciences 207 Section: 1

Race, Ethnicity and Health: Perspectives from the Social and Behavioral Sciences (191118)

David Williams

2017 Spring (2.5 Credits) **Schedule:** R 0330 PM - 0620 PM

Instructor Permissions: None **Enrollment Cap:** 70

Health outcomes in the U.S. vary dramatically as a function of race and ethnicity. The purpose of this course is to address the possible pathways by which such disparities in health status arise at different stages in the life cycle. The course will highlight research that explores this issue from social, behavioral and psychological perspectives, as well as ideas about the meaning of race and ethnicity in American society. Students will be asked to develop their own research ideas that might help illuminate the nature of specific health disparities.

Course Activities: Lectures, class presentations, discussion.

Additional Course Attributes:

Adolescent Health (191119)

Sabra Katz-Wise

Pamela Murray

2020 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

This course aims to provide an overview of major topics related to adolescent health for future public health practitioners, including health care providers, mental health workers, educators, and others. It is meant to be a broad introduction to adolescent health through covering topics that are relevant to the lives of adolescents, including: sexual and reproductive health, media influences, mental health, policy and advocacy, LGBTQ adolescents, school health, nutrition, juvenile justice, disability, substance use, and racism in healthcare. The focus of the course is domestic, since adolescence is constructed differently across cultural contexts; however, we will explore global implications as much as class experience and knowledge permits. We welcome students to bring their diverse personal and professional experiences to enrich class discussions.

Course Activities: Class discussions, guest speakers, writing assignments, group project.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Adolescent Health (191119)

Sabra Katz-Wise

Susan Gray

2017 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

Health, prevention and intervention programs will be examined in relation to adolescent physical, psychosocial and cognitive development. Health issues will be examined in the context of developmental tasks of adolescents, their strengths and vulnerabilities. Topics will include theories of behavioral change, access to health care, guidelines for preventive services, outcomes research, health policy, and alternative sites for care. Adolescent developmental tasks, resilience and strengths, as well as risk behaviors, including injury, violence, suicide, substance use and sexuality, will be explored. Focus will be domestic, with examples of federal, state and community-based adolescent health initiatives. However, input and discussion based on the personal and professional experiences of class members will enrich this class, making it most useful for meeting your goals and needs.

Course Activities: Class discussions, debates, writing exercises and a group project.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Introduction to Dissemination and Implementation Science (207018)

Shoba Ramanadhan

2021 Spring (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 25

Increasing the adoption, implementation, and sustainment of evidence-based programs, practices, and policies is critical for improving public health and addressing health disparities. The field of dissemination and implementation (D&I) science provides the theories and methods to understand and influence the path between evidence and action.

This introductory course will provide you with an overview of theories and methods to influence the pathway between evidence and action in a range of practice, policy, and public health settings. Given that D&I science sits at the intersection between research and practice, the course addresses important topics in the areas of theory and methods in tandem with practical skills for conducting D&I research and practice-based projects. This balance is reflected in the course readings and lectures as well as the assignments. Similarly, given that D&I science is conducted in team settings, the graded assignments are a mix of individual and group activities, including room for debate and group decision-making. The course is intended for Masters- and Doctoral-level students. Topics addressed include the motivation for and terminology of D&I science; designs, methods, and measures; applications of D&I science in clinical, community/public health, and policy settings; stakeholder engagement; and emerging issues.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Public Health in Action: Strategies for Policy, Advocacy, and Communication (207019)

Mary Jean Brown

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 28

This practical course will help you build the strategic skills needed by leaders in public health settings. It will provide you with the opportunity to synthesize learning from previous course work in biostatistics, epidemiology, program evaluation, and ethics and develop policy, advocacy, and communication skills related to the practice of public health. The course is broken up into three broad sections of 1) assessment by defining the evidence base underlying a specific issue or condition and identifying the data supporting implementation of a program or policy; 2) policy development through the education of policy makers and the public and techniques for process of health policy analysis using ethical frameworks and 3) assurance by linking people to needed health services and research for innovative solutions to health problems.

To maximize the practical nature of the course, you will be asked to select one area or issue affecting the public's health that you will carry through your coursework. Additional guidance will be provided in class, but you may also meet with the instructor prior to the first day of class to discuss potential topics. Subject matter familiarity is welcome when choosing a topic, but not required.

Ultimately, this course is designed to give students practical experience in preparation for internships in the Spring or Summer semesters, or as a follow-up to an internship completed in the previous Summer. Students will use writing and editing to sharpen communication skills, translate data, and use research to inform policy and program development.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Social & Behavioral Sciences 212 Section: 1

Developmental Disabilities I: Evaluation, Assessment and Systems (191120)

David Helm

2020 Fall (2.5 Credits) **Schedule:** F 0800 AM - 1000 AM

Instructor Permissions: None **Enrollment Cap:** 30

The course focuses on issues confronting professionals who work with people with developmental disabilities, their families, and the system. Materials are organized with a developmental format in mind. Emphasis for first half of semester will be on understanding the professionals' role in diagnosing, evaluating, and assessing children who have developmental disabilities or who are at high risk of acquiring them. Specific discussions of families and services will highlight the second half of the semester. The course uses outside guest speakers who are experts and work in the field.

Course note: The course is held at Children's Hospital, Karp Building, 12th floor conference room.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course

High-Risk Behavior: Epidemiology and Prevention Strategies (191122)

Vaughan Rees

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course examines behaviors that place an individual at higher risk of injuries and mortality, including substance abuse, violence, and risky sexual behaviors. With a focus on adolescent risk behavior, the course covers developmental and environmental factors that support these behaviors, as well as the design, implementation, and review of evidence-based preventive interventions. Students are guided in the development of a prevention intervention to reduce a chosen adolescent high risk behavior.

Course activities: Term paper, group presentation.

Course note: Minimum enrollment of 10.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course

Society and its Effects on Child Health (191123)

Ronald Samuels

Judith Palfrey

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course is intended to provide an in-depth study of some of the ways society effects children's health in the United States and abroad. Issues covered include: the effects of poverty on health and public policy impact on chronic illness. Approximately two-thirds of planned topics are domestic, with one-third international. Other areas covered will be determined by the students, who will pick topics of their own interest to present to the class. Students are encouraged to narrow the focus in order to present topics in some depth, but also are learning how to present issues in narrow time windows.

Course Note: The course is intended for students of a broad range of disciplines interested in child health issues, who have not necessarily had extensive training in maternal and child health.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course

Psychosocial Theories of Health and Health Behavior (191124)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course has been designed to provide students with a conceptual grounding in theoretical approaches to health behavior change. The emphasis is on psycho-social theories, but these theories are examined through the lens of social determinants of health, which asserts that individual health behaviors are shaped by psychological and biological forces as well as by historical, social, and other environmental forces. Course activities include case studies and discussions of the presence of theory (or lack thereof) in health promotion and social behavioral research. Theories and concepts covered in the class include: Social Cognitive Theory, Social Ecological Model, Health Belief Model, Theory of Planned Behavior, Health Communication, Control and Stress Theories, Social Support, and Social Networks. Heuristic models designed to integrate these theoretical perspectives will be addressed.
Course Activities: Weekly assigned readings and reflection papers, several homework activities, one class debate or mock trial, and one term paper.

Social Services for Children, Adolescents and Families (191125)

Peter Maramaldi

2021 Spring (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 32

Presents the crucial role of social services in maintaining and promoting the health of children and their families. Beginning with a historical overview of social services in the U.S., the course examines current political trends and strategies that structure the content and delivery of social services. The social and psychological determinants of the need for social services focus on events of public health relevance, including poverty in childhood, historical trauma, adoption/foster care, family violence, child care, social determinants of neurological development, and mental health services for children.

Course Activities: Seminar discussion based on current political trends and policy, case discussions and student presentations.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Presents the crucial role of social services in maintaining and promoting the health of children and their families. Beginning with a historical overview of social services in the U.S., the course examines current political trends and strategies that structure the content and delivery of social services. The social and psychological determinants of the need for social services focus on events of public health relevance, including poverty in childhood, historical trauma, adoption/foster care, family violence, child care, social determinants of neurological development, and mental health services for children.

Course Activities: Seminar discussion based on current political trends and policy, case discussions and student presentations.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Community Intervention Research Methods (191126)

Eve Nagler

2021 Spring (2.5 Credits) **Schedule:** T 0800 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** 32

This course is designed to provide students with skills in intervention research design and methodology. This course will provide an overview of research designs for community studies, application of theoretical

models to intervention and evaluation design, linking study design to intervention planning, measurement of outcomes, establishment of community partnerships for intervention planning and implementation, and qualitative/ formative research methods.

Course Activities: Assigned readings, class participation, term paper.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Social Epidemiology (212860)

Lisa Berkman

2020 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course is based on the new and completely revised edition of "Social Epidemiology" by Berkman, Kawachi and Glymour. The aim of the course is to build on basic concepts in social epidemiology and epidemiology and social sciences more broadly to examine in a critical and insightful way the evidence and methods for understanding the social determinants of health. The course is oriented towards those students who have a solid foundation in basic methods so that we can move to more analytical discussions of evidence and novel approaches to identification of the ways in which the social environment influences health. Each class will build on selected readings and a chapter from "Social Epidemiology". We will cover social exposures related to socioeconomic status, inequality, discrimination, social networks, social capital, work organization and labor markets, social and economic policies, health behaviors and affective states. The course also integrates an understanding of experimental and policy interventions and biological pathways across the substantive domains.

Course Note: If you do not meet the prerequisites, please email lberkman@hsph.harvard.edu describing comparable courses you have taken.

Requirements: **Pre-requisites: EPI201 and EPI202 and (SBS201 or SBS506). EPI202 may be taken concurrently.**

Social and Behavioral Research Methods (191127)

Jarvis Chen

2020 Fall (5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Provides a broad overview of social and behavioral research methodology, including experimental, quasi-experimental, and non-experimental research designs, measurement, sampling, data collection, and causal inference. Through methodological readings, discussion, and group and individual projects, students learn to conduct social and behavioral research. Projects include psychometric development of new measures and analysis of longitudinal data with special emphasis on appropriate methods for rigorous causal inference.

Course Activities: Assigned readings, class participation, homeworks, group and individual projects.

Course Note: a multivariate statistics course strongly recommended; course primarily for doctoral students.

Course Prerequisites: PHS2000A and PHS2000B (PHS PhD students) OR BST210 or BST211 or BST213 (DrPH or SM students)

Requirements: **Prerequisite:PHS2000A and PHS2000B (PHS PhD students) OR BST210 or BST211 or BST213 (DrPH or SM students)**

Maternal and Child Health: Programs and Policies (191128)

Henning Tiemeier

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 35

Components of health care programs for mothers and children are discussed in the context of the epidemiology of important health problems, the historical and legislative background, and social policies. The course takes a life-course approach and health programs appropriate to prenatal, early and late childhood, adolescence, and youth are presented in terms of the multidisciplinary and interdisciplinary action required to improve the health status of populations. The social, political, and environmental factors that shape current and future maternal and child health problems and policies are discussed. Topics include infant mortality and low birthweight, maternal and child mental health, maternal morbidity and mortality, services for children with special health care needs, and financing of health care for mothers and children.

Course Activities: Class discussion, written exercises.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Research on Social and Behavioral Health (191129)

Jennifer Haas

2018 Summer (2.5 Credits) **Schedule:** MTWRF 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 42

This course is an introduction to research methods that are important to designing, conducting, and evaluating research that involves the assessment of social or behavioral aspects of health. The course will cover study design, measurement, data collection, and analytic issues that are important to this area of public health research. Because surveys are an important tool for social and behavioral research, a major component of this course will focus on survey design and administration. The course will present introductory level research methods and survey design with a focus on practical applications. Students will critique published studies that examine specific aspects of social and behavioral health. Students will be expected to prepare a brief proposal for a study of an aspect of social/ behavioral health that uses a survey instrument, and draft the corresponding survey instrument. The course will consist of 15 two-hour lectures with readings, in class critique of relevant studies and measures, and a final project. Requirements are completing the required reading, active participation in class, and successful completion of the project.

Course Prerequisite(s): (BST201 or BST202&203 or BST206&207 or BST206&208) and (EPI200 or EPI201 or EPI208 or EPI500 or EPI505 or ID207). Concurrent enrollment allowed for all courses.

Restricted to HSPH degree or PCE students.

Class Notes: **Enrollment Note: Enrollment for this course is limited. All non-degree summer session students must request instructor approval, at the time of registration, through the my.harvard system. Non-degree summer students may also be asked by the instructor or department administrator to provide additional materials that supplement their request to take the course. All other students (non-degree PCE and degree students) must meet the course guidelines/prerequisites to enroll.**

Research on Social and Behavioral Health (191129)

Jennifer Haas

2019 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 32

This course is an introduction to research methods that are important to designing, conducting, and evaluating research that involves the assessment of social or behavioral aspects of health. The course will cover study design, measurement, data collection, and analytic issues that are important to this area of public health research. Because surveys are an important tool for social and behavioral research, a major component of this course will focus on survey design and administration. The course will present introductory level research methods and survey design with a focus on practical applications. Students will critique published studies that examine specific aspects of social and behavioral health. Students will be expected to prepare a brief proposal for a study of an aspect of social/ behavioral health that uses a survey instrument, and draft the corresponding survey instrument. The course will consist of 15 two-hour lectures with readings, in class critique of relevant studies and measures, and a final project. Requirements are completing the required reading, active participation in class, and successful completion of the project.

Class Notes: **Course restricted to summer-only MPH-CLE students who need to fulfill their SBS requirement in Summer 2019 order to graduate. Please submit a petition through my.harvard.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Social Disparities, Stress, and Health (191130)

Laura Kubzansky

Claudia Trudel-Fitzgerald

2021 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course is designed to review theories and research examining stress and the role it plays in social disparties in health. The course will review basic concepts and models of stress as well as the mechanisms by which stress may influence health and explain social disparities. A key aspect of the class will be to consider the quality of the research on stress and health, and students will be required to evaluate methods and measures. The course builds on a basic understanding of society and health and of epidemiology.

Course Activities: Lectures, seminars: reaction papers, class presentations and discussion, a take-home final.

Course Note: Minimum enrollment of 10.

Course Prerequisite(s): SBS201 or SBS201S or EPI200 or EPI201 or ID201

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | MPH45 HSB, MPH65 HSB, SM1 SBS, PHS SBS

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: SBS254**

Multilevel Statistical Methods: Concept and Application (191132)

S.V. Subramanian

2021 Spring (5 Credits) **Schedule:** F 0945 AM - 1245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

This course is designed to provide doctoral students with a training experience in the concept and application of multilevel statistical modeling. Students will be motivated to think about correlated and dependent data structures that arise due to sampling design and/or are inherent in the population (such as pupils nested within schools; patients nested within clinics; individuals nested within neighborhoods and so on). The substantive motivation for analyzing such complex data structures would be to make quantitative assessments about the role of contexts (e.g., schools, clinics, neighborhoods) in predicting individual outcomes. In particular, the principles of recognizing and modeling the underlying heterogeneity in average relationships would be emphasized. Linear, non-linear, and multivariate multilevel models will be covered. Upon completion, students should be able to conceptualize multilevel modeling strategies and to undertake empirical, quantitative multilevel research. The course will be lecture-based with substantial hands-on component.

Course Activities: Data management, modeling and analysis; individual assignments; project submission and class participation.

Course Notes: Knowledge of linear regression required. This course is a requirement for all SBS doctoral students. Required lab.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Multilevel Statistical Methods: Concept and Application (191132)

S.V. Subramanian

2017 Spring (5 Credits) **Schedule:** MW 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 37

This course is designed to provide doctoral students with a training experience in the concept and application of multilevel statistical modeling. Students will be motivated to think about correlated and dependent data structures that arise due to sampling design and/or are inherent in the population (such as pupils nested within schools; patients nested within clinics; individuals nested within neighborhoods and so on). The substantive motivation for analyzing such complex data structures would be to make quantitative assessments about the role of contexts (e.g., schools, clinics, neighborhoods) in predicting individual outcomes. In particular, the principles of recognizing and modeling the underlying heterogeneity in average relationships would be emphasized. Linear, non-linear, and multivariate multilevel models will be covered. Upon completion, students should be able to conceptualize multilevel modeling strategies and to undertake empirical, quantitative multilevel research. The course will be lecture-based with substantial hands-on component.

Course Activities: Data management, modeling and analysis; individual assignments; project submission and class participation.

Course Notes: This course is a requirement for all SBS doctoral students. Required lab.

Additional Course Attributes:

Program Planning: Design and Evaluation (191133)

Rebekka Lee

2018 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 30

Provides an introduction to public health intervention planning and evaluation. Applies social science principles to community assessment, theory-based design, evaluation, and implementation in applied settings. Foci will include health-related intervention for individuals, communities, organizations, and local/national groups and will discuss the various challenges that researchers and practitioners encounter when conducting this work "on the ground". There will be a strong emphasis on community involvement throughout the course.

Course activities: Assigned reading with participation in discussion and analysis of case studies, class presentations, applied individual application exercises, group projects to design an intervention and evaluation plan.

Enrollment Note: MPH-HSB students get priority. Students from other programs may request permission and will be approved in the order received, so long as there is room in the course.

Requirements: **HSPH: SBS 265**

Health Literacy (191136)

Instructor TBD

2013 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

Health literacy, defined as a goal for HP 2020, is a relatively new and robust field of inquiry. Course focuses on the links between health and literacy, on health outcomes, as well as on issues related to definitions, measures and explanatory models. Readings and discussions cover research, evaluation studies, as well as policy developments. Participants explore emerging issues and new opportunities for research, practice, and policy. Participants hone skills assessing health literacy skills, literacy demands, and health communications.

Course Activities: fieldwork assignment, class presentations, two brief reports, and a final paper.

Course Note: Two additional lab sessions [time and dates to be scheduled].

Additional Course Attributes:

Social & Behavioral Sciences 281 Section: 1

Principles of Social and Behavioral Research (191137)

Laura Kubzansky

2020 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 59

Introduces methodology to explore fundamental concepts and theories useful in understanding social and behavioral determinants of health. The course emphasizes quantitative research and social science methods applied to public health research. Major attention is given to methodology from sociology and psychology in their application to public health problems.

Course Activities: Paper, group project, tests, and homework.

Course Note: Fulfills departmental requirement for SBS masters students. Specifically geared to SBS students in the MPH and other professional master's degree program.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

2019 Fall (0 Credits)		**Schedule:**	R 0200 PM - 0330 PM
Instructor Permissions:	None	**Enrollment Cap:**	20

Introduces methodology to explore fundamental concepts and theories useful in understanding social and behavioral determinants of health. The course emphasizes quantitative research and social science methods applied to public health research. Major attention is given to methodology from sociology and psychology in their application to public health problems.

Course Activities: Paper, group project, tests, and homework.

Course Note: Fulfills departmental requirement for SBS masters students. Specifically geared to SBS students in the MPH and other professional master's degree program.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HSB, MPH65 HSB, SBS SM1

Wave 2 | MPH45 HSB, MPH65 HSB, SBS SM1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/2019 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Qualitative Research Methods in Public Health (191138)

Roberta Goldman

2020 Fall (2.5 Credits) **Schedule:** F 0945 AM - 1245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

<u>What students can expect from this course</u>: Qualitative research can be used alone or in combination with quantitative research to investigate public health questions. This introductory course will provide students with an overview of the range of important conceptual and practical issues associated with qualitative research, including providing general familiarity with the design of qualitative studies and conduct of commonly-used qualitative methods. The course begins by examining the variety of potential uses of qualitative methods in public health research and diverse qualitative research approaches. The course then explores specific topics, including: developing research questions; ethics in qualitative research; "entering" the community to conduct qualitative research; role of theory; ensuring study rigor; selecting and implementing qualitative data collection methods (participant observation, semi-structured interviews and focus groups); writing open-ended questions; sampling; data management and analysis; publishing results; writing research proposals; and considerations for choosing qualitative methods for mixed-methods qualitative or mixed-methods qualitative/quantitative studies.

Students should come to class prepared to apply concepts from readings and lectures through participation in class discussions and small group activities that will occur during every class period. In addition, students will

demonstrate application of concepts through completion of written assignments.

What this course is not: As this is an introductory course on qualitative research that provides an overview of all pertinent topics to foster familiarity with this research approach as a whole, the course cannot dwell deeply on any one topic. Students who are looking for in-depth training on a particular step in qualitative research, such as how to analyze their own qualitative dataset, or how to use qualitative coding software, are advised to select a different course.

Registration by instructor permission only: By August 31, 2020, interested students must request instructor permission in my.harvard and write a brief explanation about why they want to take this course. Selected students will be approved by September 3, 2020.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Leadership in Minority Health Policy (191139)

Alden Landry

Joan Reede

2020 Fall (2.5 Credits) **Schedule:** T 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Students will engage with faculty members at Harvard as well as key minority health policy leaders from both the public and private sectors to develop leadership skills required for effective performance in the areas of public health practice and public policy. A major focus will be strategies for career development in the area of minority health policy. Speakers will include physicians, dentists, community organizers, social workers, and others working in health policy.

Course Activities: Students are expected to actively participate in class discussions; divided in teams, students will be required to give presentations and submit papers that discuss health policies impacting vulnerable populations.

Course Requirements: In order to be considered for enrollment in the class, students must fill out the student interest form: https://bit.ly/3h2RfBC and also request instructor permission to enroll in this course. Applications will be reviewed on a rolling basis through August 28, 2020. Students who are not initially granted admission will be placed on a waitlist.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Social & Behavioral Sciences 296 Section: 1

Leadership in Minority Health Policy (191139)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 21

Students will engage with faculty members at Harvard as well as key minority health policy leaders from both the public and private sectors to develop leadership skills required for effective performance in the areas of public health practice and public policy. A major focus will be strategies for career development in the area of minority health policy. Speakers will include physicians, dentists, community organizers, social workers, and others working in health policy.

Course Activities: Students are expected to actively participate in class discussions; students will be required to submit papers as well as to engage health policy mangers and leaders on a specific health issue affecting minorities or disadvantaged communities.

Course Note: A brief interview with the course assistant is required.

Issues in Minority Health Policy (191140)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course explores public policy issues impacting the health status of minority and disadvantaged populations, with special emphasis on problem identification, policy analysis, and program planning. Participants will engage with faculty members at Harvard as well as key minority health policy leaders from both the public and private sectors to explore current and future policy affecting minority and disadvantaged populations.

Course Activities:Students are expected to actively participate in class discussions; divided in teams, students will be required to give presentations and submit papers that discuss a health policy issue or a topic impacting minority populations.

Course Note: Enrollment requires a brief interview with the course assistant as well as submission of a short personal statement.

Science-Driven Innovation in the Early Childhood Ecosystem (191141)

Jack Shonkoff

2020 Fall (5 Credits) **Schedule:** W 0900 AM - 1015 AM
W 0700 PM - 0815 PM

Instructor Permissions: None **Enrollment Cap:** 50

The primary aim of this course is to leverage advances in the biological, behavioral, and social sciences to catalyze more effective strategies to strengthen the foundations of healthy development in the early years of life. Drawing on a diversity of disciplinary perspectives, students will learn how interactions among early life experiences and genetic predispositions shape brain architecture and influence the maturation of biological systems that affect learning, behavior, and health well into the adult years. Particular attention will be focused on developing a greater understanding of how stress related to poverty, maltreatment, racism, and socioeconomic inequities is embedded biologically and leads to significant disparities in educational achievement and both physical and mental well-being. Students will explore how causal mechanisms that explain these disparities can be used to formulate new theories of change and drive science-based innovation in policy and practice that achieves breakthrough outcomes for children facing adversity.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Developing a Research Protocol (191148)

Jarvis Chen

2021 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 18

This course focuses on the process of turning scientific questions into well-defined specific aims, testable hypotheses, and rigorous methods. Students will develop the Specific Aims, Significance, and Approach sections of an NIH-style grant proposal. Major attention is given to developing research hypotheses and proposing precise methods, including describing the sample, measures, study design, and analytic techniques. Students will have the opportunity to discuss and receive feedback from the course instructor and fellow students at all stages of the proposal writing process, including at a Mock Study Section meeting at the end of the course.

Requirements: **Pre-requisites: (EPI201 or EPI500 or ID201) and SBS245**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Category	Category 2: Required Course
HSPH: Indpt. Study / Research	NO

Developing a Research Protocol (191148)

Jarvis Chen

2018 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 18

Students will develop a research protocol following an NIH format. Major attention is given to developing research hypotheses, proposing precise methods including describing the sample, measures, study design, and analytic techniques. Field methods, budgets and budget justifications will be written. Each proposal will then be reviewed by a group of expert faculty following the format of an NIH site visit. Course Prerequisite(s): (EPI201 or EPI500 or ID201) and SBS245

Requirements: **HSPH: SBS500**

Community-based Participatory Research (191149)

Jocelyn Chu

2021 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

The course is designed to introduce the principles and methods for Community-Based Participatory Research (CBPR). CBPR is a collaborative approach to research that equitably involves all partners in the research process through principles of colearning, mutual benefit and long-term commitment to improve health and reduce health disparities (Wallerstein and Duran, 2006).

This 2.5 credit seminar will provide students with foundational understanding of theories, principles and strategies of community-based participatory research, the advantages and limitations to using this approach, and some of the skills necessary for participating effectively in CBPR. Through classroom discussions, critical reflection, guest speakers and off-campus site visits, students will learn how to incorporate CBPR principles into their research and public health practice.

Registration by instructor permission only: By January 29, 2021, interested students must request instructor permission in my.harvard and write a brief explanation about why they want to take this course. Selected students will be approved by February 3, 2021.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Community-based Participatory Research (191149)

Jocelyn Chu

2020 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

The course is designed to provide an introduction to Community-based Participatory Research (CBPR). CBPR and related methods have been receiving growing attention in the field of public health. CBPR is a "collaborative approach to research that equitably involves all partners in the research process and recognizes the unique strengths that each brings. It begins with a research issue of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities." (Minkler & Wallerstein, 2003). This 2.5 credit seminar will provide

an overview of community engaged research and participatory methods, including the advantages and limitations to using this approach, and the skills necessary for participating effectively in CBPR.

Registration by instructor permission only: By January 31, 2020, interested students must request instructor permission in my.harvard and write a brief explanation about why they want to take this course. Selected students will be approved by February 5, 2020.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Community-based Participatory Action Research (191149)

Justeen Hyde

2017 Fall (2.5 Credits) **Schedule:** M 0345 PM - 0645 PM

Instructor Permissions: None **Enrollment Cap:** 17

The course is designed to provide an introduction to the area of Community-based Participatory Action Research (CBPAR). CBPAR and related methods have been receiving growing attention in the field of public health. CBPAR is defined as "a collaborative approach to research that equitably involves all partners in the research process and recognizes the unique strengths that each brings. It begins with a research issue of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities." (Minkler & Wallerstein, 2003, p.4). This 2.5 credit seminar will provide participatory action research, the advantages and limitations to using this approach, and some of the skills necessary for participating effectively in CBPAR.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Material Fee Tier	< $25

It begins with a research issue of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities." (Minkler & Wallerstein, 2003, p.4). This 2.5 credit seminar will provide participatory action research, the advantages and limitations to using this approach, and some of the skills necessary for participating effectively in CBPAR.

Community-based Participatory Action Research (191149)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

The course is designed to provide an introduction to the area of Community-based Participatory Action Research (CBPAR). CBPAR and related methods have been receiving growing attention in the field of public health. CBPAR is defined as a collaborative approach to research that equitably involves all partners in the research process and recognizes the unique strengths that each brings. It begins with a research issue of importance to the community with the aim of combining knowledge and action for social change to improve community health and eliminate health disparities." (Minkler & Wallerstein, 2003, p.4). This 2.5 credit seminar will provide participatory action research, the advantages and limitations to using this

Mass incarceration and Health in the US (214473)

Monik Jimenez

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course reviews the health implication of mass incarceration on individuals and their communities. Although the course will focus on the impact of incarceration, involvement with the criminal justice system more broadly will be discussed. The course will discuss the current state of knowledge, identify key gaps and explore examples of successful interventions to improve health outcomes among criminal justice involved individuals. Various health related implications of criminal justice involvement will be discussed, such as infectious disease, mental health, cardiovascular disease and cancer. A framework grounded in history and critical race theory will be employed in addition to careful consideration of the intersection of race. sex/gender, socioeconomic position and sexual and gender minority status. Methodological concerns and ethical implications of research conducted among individuals while in custody will also be considered. Classes will combine lectures, guest speakers representing key stakeholders and individuals with criminal justice involvement, and student led engagement. This course is appropriate for masters and doctoral level students.

Requirements: **HSPH: PreCoReq EPI201/ID201**

Social & Behavioral Sciences 503 Section: 1

Explaining Health Behavior: Insights from Behavioral Economics (191150)

Ichiro Kawachi

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 70

This course will introduce students to the application of theories from behavioral economics to the field of public health. Individual sessions will cover foundational concepts in behavioral economics, including: a) bounded rationality and dual processing; b) prospect theory and loss aversion, c) asymmetric paternalism

and the use of default options; d) the problem of inter-temporal choice and addiction; e) the use of incentives vs. commitments to promote behavior change. Examples of questions posed by the class include: "How can we incorporate novel insights from behavioral economics to improve the successful behavior change (e.g. to reduce obesity or promote smoking cessation)?"; "How can incentives be crafted to guide consumer choice? For example, "why is a tax on junk foods more effective than subsidies for healthy foods?"

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 |MPH45 HSB, MPH65 HSB, SM1 SBS

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Substance Use and Public Health (191151)

Vaughan Rees

2020 Fall (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 30

Substance use is a major public health problem which impacts individuals and society on multiple levels. The purpose of this course is to develop an understanding of factors that contribute to substance use, its consequences, and strategies to reduce or prevent harm. The course will cover the biological, psychological and social underpinnings of substance use behavior, and the nature and scope of this public health problem. Drug effects, prevalence of use and health outcomes, evidence-based treatment and prevention approaches, and public policy options will be contrasted for major licit and illicit abused substances. Students will use this background to critically evaluate national and international drug policies.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Quality Improvement and Child Health (191152)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

The goal of this course is to give public health students an understanding of the basic principles and tenets of quality improvement theory and the skills needed to apply this theory to address children?ÇÖs health and health care systems. The course is designed around issues in child health and how QI methods are being used to improve the systems that produce health and deliver care to children and their families. The first part of the course is devoted to the determinants of children?ÇÖs health and quality improvement theory. The second part of the course explores applying improvement science and one specific approach to improvement, the model for improvement, to issues in child health as case studies. These case studies include examining the relationship between and the role of improvement science in advancing the medical home and family-centered care, as well as addressing the broader challenges of childhood obesity, infant mortality, and health disparities.

Social & Behavioral Sciences 506 Section: 1

An Intro to History, Politics, & Public Health: Theories of Disease Distr. & Health Inequities (191153)

Nancy Krieger

2020 Fall (2.5 Credits)		**Schedule:**	F 1000 AM - 0100 PM
Instructor Permissions:	None	**Enrollment Cap:**	64

This course offers an introduction to the social and scientific contexts, content, and implications of theories of disease distribution, past and present. It considers how these theories shape questions people ask about--and explanations and interventions they offer for--patterns of health, disease, and well-being in their societies. Designed for both master level and doctoral level students, SBS 506 also serves a pre-requisite for SBS 507, the in-depth continuation of the course required for SBS doctoral students. SBS 506 accordingly begins by reviewing the role of theory in the production of scientific knowledge. It next introduces both text-based theories of disease distribution developed in ancient Greece and China, and also oral traditions reflecting diverse American Indian, Latin American, African, and medieval European explanations of disease distribution, followed by an overview of theories employed during the rise of epidemiology as a distinct discipline in both Europe and the United States, from 1700 to 1950. It then introduces current theories and controversies, and employs selected case examples to illustrate their application to--and implications for understanding--current and changing population distributions of disease and health inequities, especially in relation to class, race/ethnicity, gender, and sexuality. Emphasizing relationships between epidemiologic theory and practice, theories and frameworks covered include: miasma, contagion, germ theory, biomedical model, lifestyle, social production of disease/political economy of health, Latin American social medicine, health & human rights, social determinants of health, population health, psychosocial, lifecourse, and ecosocial theory.

Class Notes:

SBS 506 enrollment will end on Tuesday September 8, 2020 at 4:00pm (i.e., first Tuesday after the first Friday session of the course).

After that time students will not be able to perform any enrollment transactions (including adding, dropping, or changing enrollment)

This course offers an introduction to the social and scientific contexts, content, and implications of theories of disease distribution, past and present. It considers how these theories shape questions people ask about--and explanations and interventions they offer for--patterns of health, disease, and well-being in their societies. Designed for both master level and doctoral level students, SBS 506 also serves a pre-requisite for SBS 507, the in-depth continuation of the course required for SBS doctoral students. SBS 506 accordingly begins by reviewing the role of theory in the production of scientific knowledge. It next introduces both text-based theories of disease distribution developed in ancient Greece and China, and also oral traditions reflecting diverse American Indian, Latin American, African, and medieval European explanations of disease distribution, followed by an overview of theories employed during the rise of epidemiology as a distinct discipline in both Europe and the United States, from 1700 to 1950. It then introduces current theories and controversies, and employs selected case examples to illustrate their application to--and implications for understanding--current and changing population distributions of disease and health inequities, especially in relation to class, race/ethnicity, gender, and sexuality. Emphasizing relationships between epidemiologic theory and practice, theories and frameworks covered include: miasma, contagion, germ theory, biomedical model, lifestyle, social production of disease/political economy of health, Latin American social medicine, health & human rights, social determinants of health, population health, psychosocial, lifecourse, and ecosocial theory.

Class Notes: **SBS 506 enrollment will end on Tuesday September 10, 2019 at 4:00pm (i.e., first Tuesday after the first Friday session of the course).**

After that time students will not be able to perform any enrollment transactions (including adding, dropping, or changing enrollment)

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PHD PHS, SBS SM1

Wave 2 | MPH45 HSB, MPH65 HSB & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/2019 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **HSPH: HSPH Degr + PHD Stu**

2020 Fall (2.5 Credits) **Schedule:** F 1000 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course builds on the prerequisite course SBS 506 and its critical focus on theories of disease distribution, past and present. Intended for doctoral students (and required of SBS doctoral students), SBS 507 deepens historical and present-day understanding of contemporary mainstream theories of disease distribution and their social epidemiologic alternatives. Pairing 20th and 21st CE historical and contemporary books (not articles!), the course both builds substantive knowledge regarding the content and public health implications of diverse theories of disease distributions while also developing skills in conducting literature searches about and engaging with complex scholarly arguments and discourse. Course Prerequisites: SBS506 (or SHDH506) required

Successes & Challenges in Health Behavior Change (191155)

Alan Geller

2021 Spring (2.5 Credits)		**Schedule:**	MW 1130 AM - 0100 PM
Instructor Permissions:	None	**Enrollment Cap:**	50

Many large-scale, population-wide initiatives and campaigns have resulted in profound behavioral changes, including those for tobacco use, sun protection, and reduction of sugar sweetened beverages, to name a few.

We will follow an interconnected path that covers theory and key models, deepens our understanding of successful large-scale public health interventions, delves into the harm reduction/vaping debate, examines the critical importance of organizing and leadership, explores real-world problems with unfunded public health mandates, sees the critical importance of social support for high-risk populations, and closes with sessions on innovations. Much of the class will revolve around active discussion of readings, both in the popular and public health press, and at least two case studies. Each class will be explicitly organized around a case study and/or a lesson learned, some will be new ones, others will hopefully expand upon earlier SBS lessons.

Overall, this course aims to facilitate opportunities for students to read seminal pieces, contribute to avid discussions on a wide range of public health topics, and expand individual interests. It also seeks to encourage students to grapple with individual and collective lessons from major public health campaigns to build for more improved ones going forward. Accordingly, although the course focuses on cancer prevention initiatives, students should feel free to apply lessons learned to their areas of interest in their assignments.

Course Objectives:

1. Critically synthesize and evaluate criteria for successful population-wide interventions in population health improvement, including cancer control

2. Carefully critique the key components of historically successful large-scale cancer control interventions both for US and internationally (tobacco, skin cancer prevention, SSB laws)

3. Synthesize findings to develop evidence-based recommendations for large-scale, health behavior change interventions seeing the power of multi-level collaborations

4. Enhance practical skills for organizing and leading population-wide interventions

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Successes & Challenges in Health Behavior Change (191155)

Alan Geller

2020 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 50

Course Note: The Fall2 2019 section of SBS 508 is restricted to returning MPH students in the HSB field of study. No other students will be permitted to enroll in this section.

Many large-scale, population-wide initiatives and campaigns have resulted in profound behavioral changes-including those for tobacco use, sun protection, cardiovascular risk reduction, and cancer screening. We will carefully examine these efforts, synthesize these lessons, and seek to provide guidance for current public health campaigns such as obesity control, reduction of tanning bed use for children, and HPV and HBV campaigns. Our objectives will be to a) critically synthesize and evaluate criteria for successful population-wide interventions in population health improvement, including cancer control and cardiovascular risk reduction, b) carefully critique the key components of historically successful large-scale cancer control and cardiovascular risk reduction interventions both for US and internationally (tobacco, skin cancer prevention, cervical cancer, mammography), and c) by using lessons from above, coupled with changing context, critically analyze current large-scale health behavior change interventions for obesity control, tanning beds, and HBV vaccination programs.

Many large-scale, population-wide initiatives and campaigns have resulted in profound behavioral changes-including those for tobacco use, sun protection, cardiovascular risk reduction, and cancer screening. We will carefully examine these efforts, synthesize these lessons, and seek to provide guidance for current public health campaigns such as obesity control, reduction of tanning bed use for children, and HPV and HBV campaigns. Our objectives will be to a) critically synthesize and evaluate criteria for successful population-wide interventions in population health improvement, including cancer control and cardiovascular risk reduction, b) carefully critique the key components of historically successful large-scale cancer control and cardiovascular risk reduction interventions both for US and internationally (tobacco, skin cancer prevention, cervical cancer, mammography), and c) by using lessons from above, coupled with changing context, critically analyze current large-scale health behavior change interventions for obesity control, tanning beds, and HBV vaccination programs.

Health Communication in the 21st Century (191156)

Kasisomayajula Viswanath

2021 Spring (2.5 Credits) **Schedule:** T 0345 PM - 0645 PM

Instructor Permissions: None **Enrollment Cap:** 55

This course is designed to provide students in public health and social science with an overview of the theory and research on the role of communication in health in the 21st century. The role of communication in public health will be examined both as a product of everyday interaction with communication platforms including mass media and messages, and its planned use to accomplish particular public health goals. Research examined here looks both at planned and unplanned effects of communication in a variety of

health situations representing a range of public health topical concerns.

Note: Basic knowledge of Biostatistics required.

By the end of this course students will be able to critically assess theories and evidence on how social policies and Welfare State institutions can influence health and health disparities, with particular emphasis on comparisons across the United States and European countries. The course provides students with an understanding of how specific social policies are linked to health, and critically discusses key methodological approaches to study the impact of specific social policies and welfare state interventions on health and health disparities. By the end of the course, students will be able to (a) critically assess theories and evidence on the impact of welfare state institutions and social policies on health and health disparities; (c) describe the strengths and weaknesses of methodological approaches to assess the causal effect of social policies on health using both state-level and country-level data; and (e) outline a research plan to assess the impact of a specific social policy on health.

The course starts with an introduction to how social policy is linked to health, providing a theoretical framework for studying the causal effects of specific policies on health. Following this, the course is organized in sessions, addressing the health effects of a number of broad areas of social policy, such as education; childcare and early childhood; labor and employment; income support; Family and children; unemployment and disability; housing; and cash transfer programmes. The course also covers the impact of recessions and unemployment on health and the protective role of social policies; as well as the link between democracy and health, in the context of relevant policies.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. The course starts with an introduction to how social policy is linked to health, providing a theoretical framework for studying the causal effects of specific policies on health. Following this, the course is organized in sessions each addressing separately the health effects of eight broad areas of social policy: Education; childcare and early childhood; labor and employment; income support; Family and children; unemployment and disability; housing; and cash transfer programmes. Each session is structured across three axes: First, differences in social policy across US states and other high-income countries, and some examples of social policy interventions in low- and middle-income countries, are discussed. Second, evidence on the impact of specific policies on health based on both country-specific and cross-national studies is critically assessed. Third, specific methodological approaches are discussed based on concrete policy evaluation studies.

History and Modern Public Health 1850s - Present (191159)

Instructor TBD

2014 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

The changing social, economic and political contexts in which public health practitioners operate profoundly affect their priorities and outlooks, as well as the success of any interventions. History--both its methodology and its content--provide critical and informative windows for the student of public health practice and science. In this intensive three-week course, you will learn both the methods and content of the history of public health. For each session of this course, you will analyze the assigned readings within a supplied framework as we delve into how diseases, beliefs, and political structures have evolved and intersected with one another over time.

This course is intended to prepare you to draw on history to more fully assess and understand public health approaches and their contexts for rigorous thinking about public health. Teaching methods in this intensive one-month session will include group exercises, interactive lectures, scholarly readings and careful assessment and analysis of those readings, and class discussion and debate.

No pre-requisites required. Open to DrPH students only.

Measuring and Reporting Health Disparities (191160)

Jarvis Chen

2018 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 45

This course is focused on measuring and reporting health disparities and health inequity in the United States. In recent decades efforts across levels of government have focused on describing, monitoring, and even attempting to eliminate disparities in health outcomes across sociodemographic groups (Health People 2000; Health People 2010). Yet, there is a lack of consensus on the conceptual and operational definition of the term disparity"; and efforts to eliminate health disparities are often hampered by challenges in the identification and monitoring of difference in health outcomes across social groups, as well as challenges in the identification and monitoring of differences in health outcomes across social groups, as well as challenges in navigating the necessary inter-sectoral collaborations required to address the social determinants of negative health outcomes.

Objectives at the federal level (Healthy People 2020) have shifted from efforts attempting to reduce health disparities to efforts that prioritize eliminating disparities and achieving health equity where healthy equity is defined as "attainment of the highest level of health for all people." In an effort to describe their efforts to address these federal objectives many states have issued reports outlining their attempts to achieve health equity and reduce/eliminate health disparities. This course uses the process of creating a state level health disparities/health inequality report to contextualize the issues/challenges in the defining, measuring, monitoring, and reporting of health disparities and health inequity. Though many examples used in the course will be focused on measuring and reporting health disparities at the state level, the issues and complexities noted will be applicable across levels of government as well as for non-government entities and research.

Course Prerequisite(s): EPI200 or EPI201 or ID200 or ID201 (concurrent enrollment allowed for ID201)

Requirements: **HSPH: SBS513**

Measuring and Reporting Health Disparities (191160)

Jarvis Chen

2019 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 45

This course is focused on measuring and reporting health disparities and health inequity in the United States. In recent decades efforts across levels of government have focused on describing, monitoring, and attempting to eliminate disparities in health outcomes across sociodemographic groups (e.g. Healthy People 2000; Healthy People 2010). Yet, there is a lack of consensus on the conceptual and operational definition of the term disparity"; and efforts to eliminate health disparities are often hampered by challenges in the identification and monitoring of difference in health outcomes across social groups, as well as challenges in navigating the necessary inter-sectoral collaborations required to address the social determinants of negative health outcomes. This course uses the process of creating a state level health disparities/health equity report to contextualize the issues/challenges in the defining, measuring, monitoring, and reporting of health disparities and health inequity. Though many examples used in the course will be focused on measuring and reporting health disparities at the state level in the US, the issues and complexities noted will be applicable across levels of government as well as for non-government entities and research domestically and internationally. In addition to lectures and problem sets, participation in group discussion will be an important part of class activities and student evaluation.

Measuring and Reporting Health Disparities (191160)

Reginald Tucker-Seeley

2017 Spring (2.5 Credits) **Schedule:** TR 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 50

This course is focused on measuring and reporting health disparities and health inequity in the United States. In recent decades efforts across levels of government have focused on describing, monitoring, and even attempting to eliminate disparities in health outcomes across sociodemographic groups (Health People 2000; Health People 2010). Yet, there is a lack of consensus on the conceptual and operational definition of the term disparity"; and efforts to eliminate health disparities are often hampered by challenges in the identification and monitoring of difference in health outcomes across social groups, as well as challenges in the identification and monitoring of differences in health outcomes across social groups, as well as challenges in navigating the necessary inter-sectoral collaborations required to address

the social determinants of negative health outcomes.

Objectives at the federal level (Healthy People 2020) have shifted from efforts attempting to reduce health disparities to efforts that prioritize eliminating disparities and achieving health equity where healthy equity is defined as "attainment of the highest level of health for all people." In an effort to describe their efforts to address these federal objectives many states have issued reports outlining their attempts to achieve health equity and reduce/eliminate health disparities. This course uses the process of creating a state level health disparities/health inequality report to contextualize the issues/challenges in the defining, measuring, monitoring, and reporting of health disparities and health inequity. Though many examples used in the course will be focused on measuring and reporting health disparities at the state level, the issues and complexities noted will be applicable across levels of government as well as for non-government entities and research.

Course Prerequisite(s): EPI200 or EPI201 or ID200 or ID201 (concurrent enrollment allowed for ID201)

Reducing Socioeconomic & Racial/Ethnic Inequalities in Health:Concepts, Models, Effective Strategies (191161)

Mary Bassett

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 77

This course will provide a critical overview of conceptual approaches and empirical evidence for interventions that take a structural approach to reducing socioeconomic and racial/ethnic disparities in health. The focus is on the extent to which policies and interventions on the social determinants of health

can both improve health and reduce disparities. It considers interventions within the healthcare system, but I emphasize population-based interventions on the social determinants of health in multiple other societal sectors. Attention is also given to the social and political barriers to the development and proliferation of effective interventions to address social disparities in health.

Reducing Socioeconomic & Racial/Ethnic Inequalities in Health:Concepts, Models, Effective Strategies (191161)

David Williams

2017 Fall (2.5 Credits) **Schedule:** R 0345 PM - 0645 PM

Instructor Permissions: None **Enrollment Cap:** 77

This course will provide a critical overview of conceptual approaches and empirical evidence for interventions that take a social determinants approach to reduce socioeconomic and racial/ethnic disparities in health status. The focus is on the extent to which policies and interventions on the social determinants of health can both improve health and reduce disparities. It considers interventions within the healthcare system, but emphasis is given to population-based interventions within the healthcare system, but emphasis is given to population-based interventions on the social determinants of health in multiple other societal sectors. Attention is also given to the social and political barriers to the development and proliferation of effective intervention to address social disparities in health.

The course is designed as a three-hour session that combines a lecture format in the first half of the class with a seminar-style format in the second half during which students will lead the discussion on a pre-assigned reading with regards to evidence for an intervention on specific social conditions or conceptual, methodological, logistical or political challenges related to the development and/or implementation of successful interventions. The seminar component is designed to allow a free interchange of ideas among all students. It is expected that the classroom environment will be utilized to share expertise, vigorously challenge conventional wisdom that does not have a scientific foundation, and develop testable hypotheses that might guide future research and rigorous evaluation of interventions.

Course Prerequisite(s): (SBS201 or SBS 254 or SBS207) and (EPI201&202 or EPI500 or ID201)

Requirements: **HSPH: SBS514**

Health Literacy: Measuring Accessibility of Health Information (191162)

Lindsay Rosenfeld

2020 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course provides an overview of research in health literacy. However, the focus is on one strand of research and measurement--the assessment of health and health-related materials (in print and online). Well over 1,000 peer reviewed articles in health journals have been focused on this area of inquiry. Designed for 2.5 credits, this course will enable participants to identify and analyze factors that ease or inhibit reading, comprehension, and use of health and health-related information to accomplish specific tasks/make decisions. Participants will build skills in text and task analysis and use and apply available tools for materials assessment. Participants will become familiar with the literature related to the development of the various tools, will be prepared to analyze strengths and weaknesses of existing tools and processes, and will be poised to contribute to on-going developments. In addition, lessons learned from the assessment processes will be applied to the development and design of health materials, considering the role of print and online information in health and health-related systems. Field work assessment will be submitted as a class assignment and as a report to the host site, as appropriate.

The course will be open to students at the HSPH, HSDM and HMS as well as other Harvard affiliates.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Measures of The Health Literacy Environment (191163)

Lindsay Rosenfeld

2019 Fall (1.25 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course provides an overview of research in health literacy but focuses on one strand of research and measurement--the identification and modification of literacy related barriers in health institutions. Participants will become familiar with the current literature related to the health literacy attributes of healthcare organizations and with the various tools designed for an environmental assessment. Participants will be prepared to analyze the health literacy environment of a local institution. Futhermore,

class participants will be able to analyze the strengths and weaknesses of the various tools and be poised to contribute to the on-going discussions in the literature. The field work assessment will be submitted as a class assignment and as a report to the host site. The courses will be open to students at HSPH, HSDM and HSM as well as to Harvard affiliates (practitioners and members of IRB committees).

Requirements: **HSPH: HSPH Degr + PHD Stu**

The Science and Politics of Food (191164)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course provides an introduction to the many forces that shape what we eat, including psychological, political, biological, cultural, economic, and social. We will discuss and critically evaluate scientific research on food policies designed to improve the world's diet. This course will have a strong focus on the communication of health information and issues of health disparities as they relate to food environments and food policies. In addition, course assignments, activities, and lectures are designed to develop skills related to critiquing research and communicating evidence-based opinions in a clear and compelling manner.

Social & Behavioral Sciences 518 Section: 1

Social Sciences & Pop Health (191165)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

The course introduces students to the theories and methods of social sciences in population health. Through weekly seminars and lectures, the course will cover: social epidemiological approaches to examining health disparities, behavioral science research methods, program planning & evaluation, ethnographic approaches, health communication, and community-based interventions.
Course Restricted: DrPH students only.

Patient-Centered Communication & Health Equity - Challenges & Opportunities in the Digital Era (191166)

Andy Tan

2020 Spring (2.5 Credits) **Schedule:** F 0945 AM - 1245 PM

Instructor Permissions: None **Enrollment Cap:** 32

This course explores the various ways that patient-centered communication (PCC) influences quality of care, health behaviors, and patient-reported health outcomes through the lens of health equity. PCC is defined as communication among clinicians, patients, and family members that includes four core functions: 1) elicit and understand the patient's perspective, needs, and concerns, 2) understand the patient in his or her unique psychosocial context, 3) reach a shared understanding with the patient of the problems and treatment that is congruent with the patient's values, 4) help patients to share power and responsibility for their care by involving them in decisions to the degree that they wish (Epstein et al., 2005). The course will draw upon health care issues across the life course with a special emphasis on underserved populations (for example in relation to race/ethnicity, socioeconomic position, gender and sexual identities, those who experience language barriers, immigrant populations, physical disabilities, and mental illness), across the life course and in diverse health conditions including substance use, chronic diseases, cancer, preventive care, screening, and end-of-life care. The course will explore theoretical frameworks and concepts drawn from related fields including health communication, health informatics, health education, health literacy, and dissemination & implementation science. Throughout the course, we will discuss challenges of measuring PCC as well as important considerations when designing and implementing equitable PCC interventions within healthcare or community settings (ranging from community health centers, primary care, acute care, to specialist care settings). While the course mostly relates to equitable PCC in the clinic or community health settings, we will address implications of PCC on population health equity. We will also discuss the practical issues of designing, implementing, and evaluating theory-driven PCC interventions to address health disparities, drawing from examples of recent innovations in these interventions.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Using Public Health Theories to Solve Community Health Problems (203886)

Judy Margo

2018 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 21

In this introductory course on public health theories, students will work together in groups to apply public health theories covered in the course while solving health problems for specific communities. The course focuses on specific community partners each semester. It begins with an introduction to the basic

principles of health promotion, public health prevention strategies, and community needs assessment. Weekly sessions will focus on public health models, frameworks, and theories (collectively referred to as "theories") used in design of community health interventions. For each theory or group of theories, the course will include evaluation of (a) history, features, and constructs of the theory; (b) exemplars of the use of
each theory in solving public health problems; (c) discussions of the fit of theory, and application of theory to address discrete health problems for the semester's specified communities. The theories introduced in the course are drawn from multiple disciplines. Using a cross-disciplinary approach to apply them to public health problems, the course will consider the biological, psychological, social, and historical determinants of health and health disparities while identifying changes needed to improve public health. Students should be prepared to actively participate in class discussions and exercises.

Using Public Health Theories to Solve Community Health Problems (203886)

Cassandra Okechukwu

2016 Fall (2.5 Credits) **Schedule:** MW 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 30

In this introductory course on public health theories, students will work together in groups to apply public health theories covered in the course while solving health problems for specific communities. For the 2016-2017 academic year, focus will be on the W.M. Trotter Innovation School in Dorchester and the EcoOpportunity program at the Harvard Longwood campus. The course takes place as twice-weekly sessions. It begins with an introduction to the basic principles of health promotion, public health prevention strategies, and community needs assessment. Weekly sessions will focus on public health models, frameworks, and theories (collectively referred to as "theories") used in design of community health interventions. For each theory or group of theories, the course will include evaluation of (a) history, features, and constructs of the theory; (b) exemplars of the use of each theory in solving public health problems; (c) discussions of the fit of theory, and application of theory to address discrete health problems for the semester's specified communities. Qualitative Data Analysis for Public Health (205041)

Madina Agenor

2017 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

This intermediate/advanced seminar focuses on the analysis of qualitative data in public health. The course covers various approaches to the analysis of textual data from interview and focus group transcripts, including thematic analysis, grounded theory, interpretative phenomenological analysis, template analysis, and hybrid and general approaches to qualitative data analysis. Students will learn practical skills involved in qualitative data analysis, including identifying themes using inductive and deductive strategies, developing a codebook, coding transcripts using computer software, creating matrices and networks, writing memos, and building conceptual models. The course also addresses issues of ethics in the context of qualitative data analysis and research with marginalized populations and discusses team-based and participatory approaches to qualitative data analysis. Class sessions focus on active learning and include mini-lectures, large and small group discussions, coding practice activities, article critiques, instruction in the computer lab, student presentations, and guest lectures by qualitative researchers. This course is open to masters and doctoral students who meet the prerequisites. Students will have the option to analyze their own qualitative data during the course. Students who do not have their own qualitative data will be provided with an existing qualitative dataset to analyze.

Pre-requisites: SBS288 or GHP504 or DRPH200 or S-063 or another qualitative research methods course/prior qualitative research experience (by permission of instructor)

Requirements: **Prerequisites: SBS 288 or GHP 504 or DRPH 200 or EDU S063 or another qualitative research methods course/prior qualitative research experience (by permission of the instructor)**

Social & Behavioral Sciences 522 Section: 1

Multi-Level Theoretical Approaches to Population Health and Health-Related Behavior Change (211390)

Karen Emmons

2021 Spring (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

SBS 522 is a foundational course for Social and Behavioral Sciences. The course is predicated on the concept that health and health behavior is shaped by influences at multiple levels, ranging from individual factors to macro-social factors. The course introduces an array of conceptual theories, models, and frameworks across these multiple levels of influence, and examines their role in understanding and improving health –related behavior and population health outcomes. Class discussion and assignments will enable the learner to understand the value of theory for ethical practice, research design, and intervention development. Critical thinking about strengths and limitations of current trends in theory/conceptual frameworks will be encouraged. This course contributes to the theory requirement for the doctoral program in the SBS field of study.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | PHD-PHS SBS and Public Health Nutrition

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Social & Behavioral Sciences 535 Section: 1

Global Perspectives on Racism, Poverty, and Power (217492)

Margareta Matache

2021 Spring (2.5 Credits)		**Schedule:**	MW 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	25

The course uses interdisciplinary, critical, and transnational/global perspectives to study racism, poverty, and the disempowerment of peoples subordinated based on race, gender, and class. The sessions include readings regarding the experiences of Black Americans, Burakumin in Japan, Dalit people, Jewish people, Romani people, Palestinians, and other oppressed and racialized peoples.

This is an introductory course examining four main topics to be discussed in separate but interconnected sections: (1) race and racism; (2) poverty and racialized and gendered poverty; (3) power and disempowerment; and (4) policy, legal, and societal solutions to address racism and racialized and gendered poverty.

Race and racism: When the rise of fast sailing ships allowed colonialist European nations to send their colonial project overseas in the sixteenth century, a key construction helped them justify their domination of indigenous peoples. That was the notion of the 'Other,' which they applied through harmful labels such as criminals, backward, and savages. Such tactics have helped to validate and justify the oppression of various peoples before, during, and after colonization. In this section, we will discuss systems of oppression rooted in the ideology of inferiority. This section also pays particular attention to the impact of racism on access, quality, and outcomes in education and health.

Poverty: The existing measures of poverty provide a necessary but insufficient picture of poverty. International and national institutions operate with frameworks that are easily assessable (e.g., multidimensional poverty index or absolute poverty). Yet, these frameworks fail to encompass determinants and dimensions of poverty that are particular to historically oppressed peoples (e.g., intergenerational wealth). Thus, in this section, we will not only discuss the concepts of poverty and multidimensional poverty, but also explore ways to measure intersectional, racialized, and gendered poverty.

Power and disempowerment: The scholarship discusses oppression and racism not only as matters of rights deprivation for the oppressed, but also as "inherited advantage in power" for the oppressors or their descendants. In this section, we will discuss whether and how inherited power is transmitted economically, socially, culturally, and ideologically. We will also discuss the concept of disempowerment, and the ways it impacts individual and collective strategies to respond to racism.

Anti-racist solutions: In this final section, we will discuss examples of interventions (both successful and ineffective) to address racism and/or racialized poverty, from people and social movements to state policies and reparations.

Program Evaluation (191167)

Henning Tiemeier

Mary Jean Brown

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

The course will be held during the winter session. The classroom experience will be conducted remotely in coordination with the Centers for Disease Control and Prevention and state and local health agencies. During the first week, an intensive course will be given on the basics of evaluation as well as an introduction to the CDC, and the U.S. public health system. This will include lectures and group work to teach the components of evaluation methodology. For this week, students will be teamed with CDC program officers and public health officials from up to 10 program sites across the country. Teams will work to develop program evaluation methodologies for specific public health issues selected by the state or local health agency.

During the second week of the class, students will continue working remotely with their program sites and CDC project officers and meet with stakeholders and program administrators to refine the evaluation methods for Title V or related Maternal Child Health Programs (MCH) programs. This evaluation plan will be used by the states and the CDC to evaluate their active public health programs for the next 2-3 years.

Due to COVID-19 related travel restrictions students will work remotely in both weeks.

Class Notes: **Students are encouraged to attend a lunch and learn remote meeting in September where faculty will provide more information on the course. (Date to be announced) Students will be asked to submit a paragraph with their enrollment request describing their interest in the course and how it meets their academic goals by November 24. Accepted students will be notified no later than December 4.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Program Evaluation (191167)

Henning Tiemeier

Mary Jean Brown

2020 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

The course will be held during the winter session. The classroom experience will be conducted remotely in coordination with the Centers for Disease Control and Prevention and state and local health agencies. During the first week, an intensive course will be given on the basics of evaluation as well as an introduction to the CDC, and the U.S. public health system. This will include lectures and group work to teach the components of evaluation methodology. For this week, students will be teamed with CDC program officers and public health officials from up to 10 program sites across the country. Teams will work to develop program evaluation methodologies for specific public health issues selected by the state or local health agency.

During the second week of the class, students will continue working remotely with their program sites and CDC project officers and meet with stakeholders and program administrators to refine the evaluation

methods for Title V or related Maternal Child Health Programs (MCH) programs. This evaluation plan will be used by the states and the CDC to evaluate their active public health programs for the next 2-3 years.

Marie McCormick

Mary Jean Brown

2018 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

IMPORTANT: A formal information session, application, and selection procedure will be conducted early in the fall. For more information, please contact the instructors

This course provides students with both a theoretical background and practical experience in the design of a program evaluation using actual public health programs. Students will be expected to read all assigned materials, attend class sessions, travel to program grantees with a Center for Disease Control (CDC) program officer and write a report on the evaluation framework developed.

The course will be held during the winter session. The classroom experience will be held at CDC. During this 5 day period an intensive course will be given on the basics of evaluation as well as an introduction to the CDC, and the U.S. public health system. This will include lectures and group work to teach the components of evaluation methodology. For this week, students will be joined by CDC program officers and public health officials from up to 10 program sites where the students will be working the following week.

During the second week of the class, students will travel to 10 program sites and work with CDC and state or local public health officials to develop an evaluation plan for a state Title V (MCH) program. This evaluation plan will be used by the states and the CDC to evaluate their active public health programs for the next 2-3 years.

Students will travel through the auspices of the CDC and MCH concentration, which will cover costs associated with flights and accommodations.

2020 Fall (1.25 Credits) **Schedule:** F 0200 PM - 0330 PM
F 0200 PM - 0330 PM
F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 35

This is a year-long course worth a total of 2.5 credits (1.25 in the fall and 1.25 in the spring).

Addresses the professional training needs of MPH students who plan to pursue leadership positions in the public sector or in community health. Students, individually or in small groups, undertake fieldwork in public or community health agencies. They apply managerial and analytic techniques developed in the concentration to the solution of problems confronting these agencies. Students meet with advisors from Harvard Chan and their host agency throughout the field placement. Class sessions explore the practice of public and community health through case studies, readings and hands-on activities.

Course Activities: Field work, written and oral project report, periodical email updates and reflections to the instructor.

Requirements: **Course Restricted to students in the MPH45 Health and Social Behavior program**

Practicum and Culminating Experience for Health & Social Behavior (MPH65) (205562)

Alan Geller

2020 Fall (2.5 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 24

All students completing a Master of Public Health degree must complete a Practicum and a Culminating Experience. This course is designed to address these two degree requirements through the integration and synthesis of competencies gained during the MPH-HSB 65 degree program through coursework and field practice. The course will also provide guidance to students as they seek employment and will include seminars on salary negotiation, resume writing, and job-seeking.

Registration Note: This course is restricted to MPH-HSB 65 students in their final semester.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Advanced Topics in Women, Gender and Health (191277)

Sabra Katz-Wise

2021 Spring (1.25 Credits) **Schedule:** W 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

This interdepartmental, interdisciplinary seminar will provide a forum to analyze how diverse gender-related constructs (including identity and expression) influence public health research and practice. Invited speakers will give examples of cutting edge issues in public health research and practice, focusing on how gender contributes to understanding and intervening on population distributions of health, disease, and well-being, with an eye towards intersectionality in relation to racism, classism, heterosexism, transphobia, and other forms of social inequity and context. The structure of the course combines lectures by guest speakers who are working in the field of women, gender, and health, as well as in-depth student-led discussions of assigned readings/media. Students will create brief teaching examples that use gender-based analysis while cultivating core skills in public health.

Course Note: Minimum enrollment of 5; maximum enrollment of 20.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Advanced Topics in Women, Gender and Health (191277)

Sabra Katz-Wise

2020 Spring (1.25 Credits) **Schedule:** W 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

This interdepartmental, interdisciplinary seminar will offer the chance to analyze ways by which diverse constructs of gender influence public health research and practice. Using different examples each week, the core WGH faculty and students will focus on how gender contributes to classifying, surveying, understanding and intervening on population distributions of health, disease, and well-being. Discussion of these examples will draw on different disciplines, conceptual frameworks, and methodological approaches (both quantitative and qualitative). For example, traditional epidemiological and biostatistical methods, along with multilevel, ecosocial, and health and human rights frameworks will be applied, as appropriate, in the assessment of gender-based health related disorders. The format will include formal presentations and informal discussions. Students will create brief teaching examples that use gender-based analysis while cultivating core skills in public health.

Course Note: Minimum enrollment of 5; maximum enrollment of 20.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Allegra Gordon

2018 Spring (1.25 Credits) **Schedule:** W 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

This interdepartmental, interdisciplinary seminar will offer the chance to analyze ways by which diverse constructs of gender influence public health research and practice. Using different examples each week, the core WGH faculty and students will focus on how gender contributes to classifying, surveying, understanding and intervening on population distributions of health, disease, and well-being. Discussion of these examples will draw on different disciplines, conceptual frameworks, and methodological approaches (both quantitative and qualitative). For example, traditional epidemiological and biostatistical methods, along with multilevel, ecosocial, and health and human rights frameworks will be applied, as appropriate, in the assessment of gender-based health related disorders. The format will include formal presentations and informal discussions.

Course Note: Minimum enrollment of 5; maximum enrollment of 20.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Karestan Koenen

2016 Fall (2.5 Credits) **Schedule:** F 0130 PM - 0420 PM

Instructor Permissions: None **Enrollment Cap:** 40

This course will introduce students to gender as a theoretical concept and a category of analysis in public health ?Çô specifically, the ways in which gender contributes to differentially structuring women and men? ÇÖs experiences of health. The course proposes to answer such questions as: How can understanding gender structures help us interpret public health research? How has gender influenced the construction of public health in diverse societies? How do our social frameworks and structures, such as gender, affect people?ÇÖs experiences and expectations of health? How is the success of behavioral change interventions and the validity of basic behavioral and evaluation research affected by gender?

This course is designed for students who wish to enhance their understanding of the social and cultural factors that have influenced the development of individual?ÇÖs and societal health. The interactions

between gender, class, race/ethnicity, and sexuality will be emphasized.

The course will cover a broad range of health issues for which gender has been of special importance. Topics covered include: reproductive health; sexual health and sexuality; mental health; violence; occupational health and work; environmental health and pollution; and chronic diseases. Issues relating to the distribution of health, disease, and well-being will be addressed across sessions. Additionally, sessions will include global, US domestic, and historical perspectives, with attention paid to both epidemiologic investigation, social and behavioral sciences, and health policy dimensions.

Embodying Gender: Public Health, Biology and the Body Politic (191281)

Nancy Krieger

2021 Spring (2.5 Credits) **Schedule:** WRF 1000 AM - 1230 PM
WRF 0200 PM - 0430 PM
TW 1000 AM - 1230 PM
F 0200 PM - 0515 PM
TW 0200 PM - 0430 PM

Instructor Permissions: None **Enrollment Cap:** 16

This course will focus on the social and biological processes and relationships from interpersonal to institutional involved in embodying gender, as part of shaping and changing societal distributions of, including inequities in, health, disease, and well-being. It will consider how different frameworks of

conceptualizing and addressing gender, biological sex, and sexuality (that is, the lived experience of being sexual beings, in relation to self, other people, and institutions) shape questions people ask about and explanations and interventions they offer for a variety of health outcomes. Examples span the lifecourse and historical generations and include chronic non-communicable diseases, HIV/AIDS, occupational injuries, reproductive health, mental health, and mortality, each analyzed in relation to societal and ecological context, global health policy and human rights, work, and the behaviors of people and institutions. In all these cases, issues of gender and sexuality will be related to other societal determinants of health, including social class, racism, and other forms of inequality. The objective is to improve praxis for research, teaching, policy, and action, so as to advance knowledge and action needed for producing sound public health policy and health equity, including in relation to gender and sexuality.

Course Note: Prerequisite is a prior course on gender analysis and health, such as: WGH 201, WGH207, WGH210, WGH211, WGH220, SBS506, SBS507, ANTHRO1882, HLS2242, HLS2513, HLS2540, or another prior course on gender analysis and health (with instructor's approval)

Requirements: **Prerequisite: WGH 201, WGH207, WGH210, WGH211, WGH220, SBS506, SBS507, ANTHRO1882, HLS2242, HLS2513, HLS2540**

Embodying Gender: Public Health, Biology and the Body Politic (191281)

Nancy Krieger

2017 Spring (2.5 Credits)

Schedule: WRF 0930 AM - 1130 AM
WRF 0230 PM - 0430 PM
TW 0930 AM - 1130 AM
TW 0230 PM - 0430 PM
F 0100 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: 15

This course will focus on the social and biological processes and relationships from interpersonal to institutional involved in embodying gender, as part of shaping and changing societal distributions of, including inequities in, health, disease, and well-being. It will consider how different frameworks of conceptualizing and addressing gender, biological sex, and sexuality (that is, the lived experience of being sexual beings, in relation to self, other people, and institutions) shape questions people ask about and explanations and interventions they offer for a variety of health outcomes. Examples span the lifecourse and historical generations and include chronic non-communicable diseases, HIV/AIDS, occupational injuries, reproductive health, mental health, and mortality, each analyzed in relation to societal and ecological context, global health policy and human rights, work, and the behaviors of people and institutions. In all these cases, issues of gender and sexuality will be related to other societal determinants of health, including social class, racism, and other forms of inequality. The objective is to improve praxis for research, teaching, policy, and action, so as to advance knowledge and action needed for producing sound public health policy and health equity, including in relation to gender and sexuality.

Course Note: Prerequisites include WGH 211 or WGH 210 or SBS 506 or SBS 507, or prior course with gender analysis to be approved by instructor.

Requirements: **HSPH: WGH250**

Issues in Mental Hlth-Ind Stdy (191283)

Barbara Gottlieb

2017 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 5

This independent study course is offered to students who are enrolled in WGH 210 Fall 2. The course will supplement the themes and topics of WGH 210, including illness constructs, trauma, embodiment, pain and eating disorders with a mentored field and service learning experience. Students will be required to provide 20 hours of service to one of several local sites selected for their relevance to course themes (for example, a shelter, an psychiatric in-patient unit, a school-based clinic), maintain a structured portfolio of reflections and commentary based on field experiences and readings, and attend 2 mentoring sessions.

Course activities: Field placement, preparation of final portfolio.

Course note: Minimum enrollment 1 student

Course Prerequisites: WGH210 required (may be taken concurrently)

Requirements: **HSPH: WGH304**

The History of Public Health in the United States From the Colonial Era to the Present (205520)

Evelynn Hammonds

2018 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 65

"Public Health is an organized community effort to address the public interest in health by applying scientific and technical knowledge to prevent disease and promote health." *The Future of Public Health*. Washington, DC: National Academies Press; 1988.

This course focuses on the history of public health in the United States from the colonial period to the present. It will examine how events in the past have shaped the definition of public health. Major themes in the history of public health will be addressed including: the changing role of the State – federal, state and local communities in addressing the health status of the US population; urbanization, the changing interpretation of disease causation; the introduction and application of discoveries in bacteriology; the changing relationship between medicine and public health; the emergence and expansion of public health as a professional practice; the control of disease in populations in urban environments, homes, and workplaces. The course will examine the effects of public health practices with respect to gender, race, class, age, and sexuality. Class sessions will include: mini-lectures, large and small group discussions, film screenings, student presentations, and instruction in analyzing primary and secondary historical texts.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | DRPH, PHD-BIOST, PHD-BPH

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Interdepartmental 225 Section: 1

Introduction to Life-course Epidemiology (216349)

Henning Tiemeier

Janet Rich-Edwards

Grace Chan

2021 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course will cover concepts and methods related to life-course epidemiology. A life-course perspective is essential in conducting epidemiological research, designing studies, and interpreting study findings. A life-course approach to the epidemiology of health and disease risk uses a multidisciplinary framework to understand the importance of time and timing associations of exposure and outcomes at the individual and the population level. It also offers a way to conceptualize how social, economic and behavioral determinants of health experienced at different stages of the life course, can differentially influence the development of diseases, as mediated through proximal biological processes. When conducting epidemiological studies, integrating a life-course perspective can help to clarify the research question, determine the study design, improve the study inferences, and thus render the study of a greater value for public health and clinical practice. Throughout this course, some historical background, theories of life-course epidemiology and examples of how various epidemiologic research questions can be embedded in life-course perspective will be discussed. Most importantly, epidemiologic methods and statistical approaches in addressing such challenges will be introduced all of which are related to time and timing of exposure and outcome.

This course is designed to cover life-course epidemiologic concepts in different life periods, starting from intrauterine, intrapartum, childhood, adulthood, and old age, with an emphasis on the methods. Topics include pre-conception health, fetal programing, resilience and buffering, critical and sensitive periods, latency, biological clock, competing risks, regression dilution, multi-generational transmission, and individual- and community-level interventions.

Requirements: **HSPH: PW EPI 201 + EPI 202 + BST 201 OR PHS 2000A**

Social Epidemiology (190762)

Lisa Berkman

2019 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course is based on the new and completely revised edition of Social Epidemiology" by Berkman, Kawachi and Glymour. The aim of the course is to build on basic concepts in social epidemiology and epidemiology and social sciences more broadly to examine in a critical and insightful way the evidence and methods for understanding the social determinants of health. The course is oriented towards those students who have a solid foundation in basic methods so that we can move to more analytical discussions of evidence and novel approaches to identification of the ways in which the social environment influences health. Each class will build on selected readings and a chapter from "Social Epidemiology". We will cover

social exposures related to socioeconomic status, inequality, discrimination, social networks, social capital, work organization and labor markets, social and economic policies, health behaviors and affective states. The course also integrates an understanding of experimental and policy interventions and biological pathways across the substantive domains.

Course Note: If you do not meet the prerequisites, please email lberkman@hsph.harvard.edu describing comparable courses you have taken.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Practice and Culminating Experience for HSB-MPH-45 (190775)

Barbara Gottlieb

2017 Spring (2.5 Credits) **Schedule:** F 0830 AM - 1020 AM

Instructor Permissions: None **Enrollment Cap:** 35

Addresses the professional training needs of MPH students who plan to pursue leadership positions in the public sector or in community health. Students, in small groups, undertake fieldwork in public or community health agencies. They apply managerial and analytic techniques developed in the concentration to the solution of problems confronting these agencies. Students meet with advisors from Harvard Chan and their host agency throughout the field placement. Class sessions explore the practice of public and community health through case studies, readings and hands-on activities.

Course Activities: Field work, written and oral project report, periodical email updates and reflections to the instructor.

Social Entrepreneurship (190811)

Teresa Chahine

2017 Spring (2.5 Credits) **Schedule:** F 0900 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** 37

This course introduces students to the concept of social entrepreneurship, which entails developing and implementing innovative, effective, scalable and financially viable social products or services. Students will gain practice in thinking about public health problems in a solution oriented manner, and learning how to channel those ideas into a well-planned business case for an intervention (whether in the form of a project or organization). Examples of social entrepreneurship initiatives will be provided through weekly readings and guest speakers, and students will be required to read and discuss these in class.
